

Binghamton Geomorphology Symposium 10: The Landscape Evolution of the Ammonoosuc-Saco River Basin and the White Mountains, New England, USA

The Binghamton Geomorphology Symposium is a biennial conference that brings together geomorphologists from around the world to discuss the latest research on landscape evolution. The 10th symposium was held in New England in 2010 and focused on the evolution of the Ammonoosuc-Saco River Basin and the White Mountains.

The Ammonoosuc-Saco River Basin is a large drainage basin located in northern New England. The basin is home to a variety of landforms, including mountains, hills, valleys, and rivers. The White Mountains are a mountain range located in the northern part of the basin. The mountains

are home to some of the highest peaks in New England, including Mount Washington.

The landscape of the Ammonoosuc-Saco River Basin and the White Mountains has been shaped by a variety of processes over time. These processes include erosion, deposition, glaciation, and tectonics. The symposium brought together experts on these processes to discuss the latest research on the landscape evolution of the region.

Symposium Proceedings

The proceedings of the symposium were published in a special issue of the journal *Geomorphology*. The issue contains 15 papers that cover a wide range of topics related to the landscape evolution of the Ammonoosuc-Saco River Basin and the White Mountains.

The papers in the issue are divided into four sections:

*** Geomorphology of the Ammonoosuc-Saco River Basin ***

Geomorphology of the White Mountains * Landscape Evolution of the Ammonoosuc-Saco River Basin and the White Mountains * Field Trip Guide to the Ammonoosuc-Saco River Basin and the White Mountains

The papers in the first section provide a general overview of the geomorphology of the Ammonoosuc-Saco River Basin. The papers in the second section focus on the geomorphology of the White Mountains. The papers in the third section discuss the landscape evolution of the Ammonoosuc-Saco River Basin and the White Mountains. The papers in the fourth section provide a field trip guide to the region.

The Binghamton Geomorphology Symposium 10 was a successful conference that brought together experts on the landscape evolution of the Ammonoosuc-Saco River Basin and the White Mountains. The proceedings of the symposium provide a valuable resource for researchers and students interested in the geomorphology of the region.
