The book is divided into four parts:

1. **The Earth System**: This part introduces the Earth as a system, including its atmosphere, hydrosphere, lithosphere, and biosphere. It also discusses the interactions between these systems and how they have changed over time.
2. **Surface Processes**: This part covers the processes that shape the Earth's surface, including weathering, erosion, deposition, and mountain building. It also discusses the role of water, ice, and wind in these processes.

3. **Earth's Interior**: This part explores the Earth's interior, including its structure, composition, and dynamics. It also discusses the processes that drive plate tectonics and earthquakes.
4. **Earth's History**: This part covers the Earth's history, from its formation to the present day. It also discusses the evidence for past climate change and the role of humans in shaping the Earth's environment.

Earth: An to Physical Geology is written in a clear and concise style, with numerous illustrations and examples to help students understand the complex concepts of physical geology.

The book is ideal for introductory courses in physical geology for both undergraduate and graduate students. It is also a valuable resource for anyone interested in learning more about the Earth's physical systems and processes.

Instructor Resources

In addition to the free textbook, the following instructor resources are available:

- **Instructor's Manual**: This manual provides teaching tips, discussion questions, and test questions.

- **PowerPoint Presentations**: These presentations are designed to accompany the textbook chapters.
- **Test Bank**: This bank contains multiple-choice, short-answer, and essay questions.

To access the instructor resources, please contact the publisher.

About the Authors

Edward J. Tarbuck is a professor of earth and space sciences at the University of California, Santa Barbara. He is the author of numerous textbooks and articles on geology, including the best-selling **Earth Science** and **Physical Geology**.

Frederick K. Lutgens is a professor of earth and space sciences at the University of Colorado, Boulder. He is the author of several textbooks and articles on geology, including the best-selling **Earth Science** and **Physical Geology**.

Dennis Tasa is a professor of earth and space sciences at the University of California, Berkeley. He is the author of several textbooks and articles on geology, including the best-selling **Earth Science** and **Physical Geology**.
